

1. What I have done

- Unified the search workflow for both deployed and local environments, reducing code duplication.
- Improved the structure of the codebase through refactoring and a more logical organization of files and folders.
- Added support for displaying multiple image results.
- Started exploring Blender as well as BlenderKit and Poly Haven assets for improving the visual quality of the VR museum.

2. Where I need support

- Setting up vitrivr configuration files for video and 3D model retrieval, as well as guidance on the required code modifications to support these media types.

3. What I am planning to do for the next meeting

☐ Add support for video and 3D model search results

☐ Improve the VR museum environment

☐ Continue evaluating and integrating Blender assets into the workflow

☐ Prepare for the next weekly meeting
